Recommended files and upload order for the
Change Navigation GPT

Use this pack as the first knowledge library for the custom Change Navigation GPT. The GPT's core behavior should live in Configure > Instructions. These files are the reference library the GPT should use to apply the framework, examples, risk rules, and writing standards.

Clean build rule

Upload one source-of-truth version of each document. Avoid uploading old drafts, duplicate frameworks, comment-heavy versions, or raw competency PDFs until the distilled functional impact guide is stable.

Recommended upload order

Order	File	Purpose
1	01_Change_Navigation_Strategic_Framework_Source_of_Truth	Main operating model and detailed framework steps.
2	02_Decision_Mapping_Logic_v1	Change type, T-shirt sizing, routing logic, output bundles, escalation rules, and GPT intake logic.
3	03_Functional_Impact_Translation_Guide_v1	Function-family prompts, risk lenses, support needs, and likely outputs.
4	04_Risk_Signal_Readiness_Gate	Readiness-before-reach rules and channel risk classification.
5	05_Cai_Change_Navigation_Framework_AI_Example	Gold-standard AI-sensitive example for narrative, guardrails, and cascade discipline.
6	06_Echo_Editorial_Guardrails	Writing and language standards, especially for AI, trust, WIIFM, and durable leader-ready language.
7	07_Example_Large_Tool_Workflow_Change_Genesys	Example of a large tool/workflow/system change.
8	08_Example_XL_People_Change_Rx_VD_Migration	Example of a people-sensitive, leader-first cascade.
9	09_Example_Medium_Change_Template	Example of a managed M-size change with standard communications support.
10	10_Sample_Email_Style_Reference	Tone, structure, and message style references.
11	11_GPT_Configure_Instructions_Starter	Paste-ready GPT instructions, conversation starters, output rules, and test rubric.

What belongs in Configure vs. Knowledge

Location	What belongs there	Why
Configure > Instructions	Role, operating logic, intake sequence, output rules, escalation rules, editorial guardrails, and human judgment requirements.	Instructions control behavior every time.
Knowledge	Framework files, examples, templates, risk/readiness guides, and style references.	Knowledge gives the GPT context and source material.
Do not rely on Knowledge alone	The decision spine should be written directly into Instructions.	A GPT may not consistently infer behavior from reference documents alone.

First-pilot test cases

- **Cai:** Expected to route to L or XL depending on phase; should flag AI/automation sensitivity, leader cascade, language guardrails, and internal trust before external storytelling.
- **Genesys:** Expected to route to L; should recommend training, huddles, reminders, launch support, rollback language, and post-launch reinforcement.
- **Rx/Vet Diet Migration:** Expected to route to XL; should flag people impact, HR sensitivity, leader-first sequencing, 1:1 guidance, confidentiality, and broader awareness only after direct conversations.
- **Simple awareness update:** Expected to route to XS or S; should not overbuild.

Source basis

This knowledge document was generated from the source materials listed below. It is intended to make the custom GPT's reference library cleaner and easier to follow; it is not a substitute for human review.

- Change Navigation Strategic Framework source document.
- Risk Signal readiness guidance.
- Cai Change Navigation and Communication Framework.
- Genesys, Rx/Vet Diet, Medium Project Template, sample email, Echo editorial guardrail source files.
- Functional competency models distilled into the Functional Impact Translation Guide.
