

Decision Mapping Logic

02

Change type, T-shirt sizing, required outputs,
and GPT routing rules

This document turns the Change Navigation Framework into decision logic a custom GPT can follow. It should be uploaded as text-based knowledge and also reflected directly in the GPT's Configure instructions.

Operating logic

Change type determines the questions. T-shirt size determines the rigor. Functional impact determines the support model. Readiness determines the cascade.

1. Start by classifying the change type

Before sizing the work or drafting any plan, identify the nature of the change. Most initiatives include more than one type of change. Select one primary change type and up to two secondary types.

Change type	Core question	Usually requires
Awareness / Information	Do people simply need to know something?	Clear update, audience list, timing, owner, resource link if needed.
Behavior Change	What do people need to do differently?	Enablement, examples, reinforcement, adoption signals.
Mindset / Narrative Change	What belief, interpretation, or confidence shift is needed?	Core narrative, tenets, guardrails, leader cascade, feedback loop.
Workflow / Process Change	What steps, routines, handoffs, or operating rhythms are changing?	SOP update, job aid, huddle guide, training, support path.
Tool / System Change	What tool, system, access point, data flow, or technical process is changing?	Training, demo, launch support, known issues, fallback plan.
Role / Org / Staffing Change	Are roles, reporting lines, schedules, staffing, pay, expectations, or team alignment changing?	HR review, leader talking points, 1:1 cascade, FAQ, confidentiality guidance.
Policy / Compliance Change	Are rules, requirements, documentation, privacy, legal, or regulatory expectations changing?	Legal/HR/compliance review, approved language, auditability, escalation guidance.
Customer / Partner Experience Change	Will customers, vendors, candidates, or partners experience something differently?	Experience impact review, frontline guidance, support path, customer-facing language if needed.
Data / Measurement Change	Are metrics, reporting, dashboards, definitions, or success measures changing?	Metric definitions, dashboard owner, data quality checks, measurement cadence.
AI / Automation Change	Is AI, automation, self-service, routing, recommendations, or decision support involved?	Support-role framing, human judgment boundaries, AI language guardrails, leader FAQ.
Commercial / Vendor / Financial Change	Are vendors, pricing, assortment, sourcing, inventory, budget, or P&L affected?	Finance view, vendor plan, sourcing timeline, business metric dashboard.

2. Size the change

The size of the change is based on impact, sensitivity, risk, readiness, and adoption needs — not just how many people are affected. A small audience can still be an XL change if the change is sensitive or high-risk.

Size	Path	Use when	Required outputs	Typical activation volume
XS	Awareness update	Information-only; no behavior change; no sensitivity; no enablement needed.	Change summary, owner, audience, timing, single update.	1 touchpoint
S	Contained change	Small process, resource, timing, or audience-specific update with limited impact.	Light plan, simple risk check, message, optional FAQ/resource.	1–2 touchpoints
M	Managed change	Defined audience; some behavior, workflow, tool, or expectation change; moderate support needed.	Strategic brief, core narrative, light persona/functional impact scan, risk scan, leader note, FAQ/job aid, reinforcement.	3–6 touchpoints
L	High-impact change	Daily work changes, leader translation needed, training required, multiple functions involved, or adoption risk present.	Full framework: narrative, personas, functional impact, risk map, tenets, guardrails, pressure test, activation roadmap, leader toolkit, training/resources, measurement.	6–12+ touchpoints
XL	Enterprise-critical or sensitive change	Cross-functional, executive-visible, legal/HR/compliance-sensitive, AI-sensitive, workforce-impacting, external, reputational, or operating-model change.	Full framework plus executive sponsor alignment, decision rights, Legal/HR/PR review flags, stabilization plan, measurement dashboard, retrospective.	Multi-phase roadmap

3. Escalation rules

- Do not average risk. Use the highest meaningful risk signal.
- If the change affects role, pay, staffing, reporting lines, job security, or performance expectations, size it as L or XL.
- If AI or automation could be interpreted as replacement, surveillance, deflection, or reduced human judgment, size it as L or XL.
- If legal, compliance, privacy, veterinary, HR, external visibility, or reputational risk is present, size it as L or XL.
- If three or more impact dimensions are Medium, size the change as at least M and consider L if leader readiness is not strong.
- If leaders are likely to learn at the same time as impacted Team Members, pause broad activation.
- If a high-reach or narrative-amplifying channel is requested before leader readiness, pause and recommend leader enablement first.

4. Decision flow

1. Change identified
2. Classify the primary and secondary change type
3. Size the change as XS / S / M / L / XL
4. Confirm required framework depth
5. Define the strategic change
6. Build the core narrative
7. Map personas and translate functional impact
8. Identify narrative, adoption, and readiness risks
9. Establish tenets and guardrails
10. Align stakeholders and pressure-test
11. Build the activation roadmap
12. Equip leaders and change carriers
13. Apply readiness gate
14. Activate, reinforce, measure, and learn

5. Output bundles by path

Path	Output bundle	GPT behavior
XS	Change summary; audience; owner; timing; single update; optional resource link.	Do not build full framework unless risk is later escalated.
S	Change summary; audience impact scan; simple risk check; draft message; optional FAQ or resource; owner and timing.	Keep light. Avoid unnecessary leader toolkits unless leaders must translate the change.
M	Strategic brief; core narrative; light persona map; light functional impact scan; risk scan; stakeholder map; leader note; impacted audience message; FAQ/job aid; reinforcement reminder.	Use the standard path. Include reinforcement and measurement, but keep the plan scoped.
L	Change Charter; core narrative; persona map; functional impact translation; narrative/adoption risk map; tenets; guardrails; stakeholder pressure test; activation roadmap; leader toolkit; training/resource plan; FAQ; measurement loop.	Use full framework. Do not skip stakeholder pressure testing or leader enablement.
XL	Everything in L plus executive sponsor alignment; decision rights map; Legal/HR/PR review flags; confidential cascade if needed; stabilization plan; measurement dashboard; retrospective.	Treat as executive-governed. Broad activation waits for readiness.

6. Intake questions the GPT should ask

Define the change

- What is changing?
- Why now?
- What business outcome does this support?
- What behavior, decision, workflow, or mindset needs to change?
- What does success look like?
- Who owns the outcome?
- What is the target date?

Classify and size the change

- What is the primary change type? What are the secondary change types?
- Who is directly impacted? Who is indirectly impacted?
- Does this change daily work, tools, systems, role expectations, staffing, customer experience, policy, data, reporting, or decision rights?
- Is AI, automation, legal, HR, privacy, compliance, professional judgment, or external visibility involved?
- Is training required?
- Are leaders already aligned and equipped?

Map impact and readiness

- Which personas or leader levels are impacted?
- Which functions are impacted?
- What action does each impacted audience need to take?
- What support paths, resources, or escalation points exist?
- How will adoption be measured?

7. Human judgment flags

- Unclear owner or decision rights.
- High risk without mitigation.
- Leader readiness gap.
- Training or resource gap.
- Legal, HR, compliance, privacy, veterinary, or PR review needed.
- External visibility risk.
- AI or automation misinterpretation risk.
- Compressed or unstable timeline.
- Missing measurement or reinforcement plan.
- Broad channel requested before leaders are ready.

8. Readiness gate

Reach never comes before readiness

Do not recommend broad or narrative-amplifying channels until leaders are equipped, the narrative is

stable, resources are ready, and support paths are clear.

9. GPT output rule

The GPT should recommend a path and produce only the outputs appropriate to that path. It should not route every change to the full framework.

Source basis

This knowledge document was generated from the source materials listed below. It is intended to make the custom GPT's reference library cleaner and easier to follow; it is not a substitute for human review.

- Change Navigation Strategic Framework.
- Risk Signal readiness guidance.
- CS Communications Medium Project Template.
- Genesys Communication Plan.
- Rx/Vet Diet Migration Communication Plan.
- Echo GPT editorial guardrails.
