

Example: Large Tool / Workflow Change

07

Genesys rollout reference for L-size change planning

Use this as a teaching example for a large tool, system, and workflow change. The GPT should learn the pattern: phased rollout, audience-specific messaging, training, huddles, launch support, rollback language, and post-launch reinforcement.

Why this routes to L

- Changes daily work and contact-handling workflows.
- Introduces/replaces tools and system access points.
- Requires training, leader support, launch reminders, and post-launch support.
- Has operational dependencies, potential rollback scenarios, and multi-channel go-live timing.

Core change summary

Element	Example pattern
What is changing	Genesys replaces prior voice/contact-routing and softphone systems, with changes to login, queue control, and contact handling.
Why it matters	The change supports smarter routing, cross-channel visibility, and a stronger foundation for future operational support.
Who is impacted	Agents, Team Managers, C04+ leaders, L&D, project partners, CCOC, and support/war room teams.
What support is needed	Training, huddle guides, Manager Mewsletter/Pupdate reminders, launch-day DIBs, office hours, FAQs, and rollback messaging.
Post-launch need	Support reminders, issue routing, UI update notices, and continued reinforcement.

Activation pattern

Phase	Purpose	Example outputs
Early awareness	Prepare leaders and impacted audiences for upcoming change.	Kickoff emails, coming-soon updates, launch delay notices when needed.
Training preparation	Make expectations clear before training begins.	Training details, protected training time, make-up instructions.
Training + huddles	Build practical readiness.	Chewy U modules, Team Meeting training, huddle guides, surveys.
Launch reminders	Reduce confusion right before launch.	Pupdate/Manager Mewsletter reminders, CC Updates, launch date/channel reminders.

Phase	Purpose	Example outputs
Launch support	Give real-time guidance during go-live.	DIBs, war room messages, support instructions.
Fallback / rollback	Preserve operational clarity if issues occur.	Channel-specific rollback language and ownership.
Post-launch reinforcement	Support stabilization and adoption.	Follow-up reminders, support comms, UI update notices.

GPT output expectations for similar changes

- Recommend an L path.
- Build a full activation roadmap, not just a communications calendar.
- Include training, launch support, known issues, rollback/fallback plan, support ownership, and post-launch reinforcement.
- Ask whether UAT, training, knowledge content, support paths, and war room coverage are ready before recommending broad activation.

Source basis

This knowledge document was generated from the source materials listed below. It is intended to make the custom GPT's reference library cleaner and easier to follow; it is not a substitute for human review.

- Genesys Communication Plan.
- Risk Signal readiness guidance.
- Change Navigation Strategic Framework.
