Tone, structure, and drafting patterns for leader and Team Member communications

Use this document to guide message structure and tone. The GPT should not copy examples verbatim unless asked. It should learn the style: clear context, plainspoken headings, right audience, practical action, and leader-ready language.

Style principles

- Start with what the audience needs to know.
- Name dates, audiences, and actions clearly.
- Use simple headings when the message has several parts.
- Separate leader guidance from Team Member-facing language.
- Use confidentiality instructions when timing or sensitivity requires it.
- Close with where to go for questions or support.
- Keep emails scannable and practical.

Reusable message patterns

Pattern	Use when	Structure
Confidential leader launch	Leaders need advance awareness before broad launch.	Confidentiality note; what is launching; what remains unchanged; resources; do not share guidance; next communication timing.
Process reminder	Audience needs to follow consistent steps.	Purpose; when to use process; steps; ticket or tracking requirements; final thanks.
Training rollout	Leaders must support training completion.	Why training matters; timeline by week; leader role; make-up guidance; resource path.
Agent / Team Member product launch	Impacted users gain access to a tool or workflow.	What's new; WIIFM; what to know; examples; where to go for help.
Org-wide rollout	Broad awareness is needed after leaders are ready.	Launch summary; timing; who gets access; what changes; what stays the same; resources.

Example snippets to emulate

Confidential leader update

This information must remain confidential until launch. We've prepared FAQs and talking points to help Team Members address questions. Please do not share further or discuss in broad channels until the announcement is live.

Training rollout

As we prepare to assign training, we want leaders to have the context and resources needed to support their teams. Training time should be protected, and make-up sessions should be scheduled for Team Members who miss the initial session.

Tool launch

This tool is designed to help Team Members find information faster and reduce repetitive searching. Use it when it helps, and continue to follow existing guidance and judgment for customer interactions.

GPT drafting rules

- Do not overuse “excited.”
- Do not lead with technology features before explaining the practical impact.
- Do not make every message long. XS/S outputs should stay light.
- Use headings only when they make the message easier to scan.
- For AI tools, avoid “teammate,” “colleague,” or human-equivalent framing.

Source basis

This knowledge document was generated from the source materials listed below. It is intended to make the custom GPT’s reference library cleaner and easier to follow; it is not a substitute for human review.
